YOUR PROMPT

Product overview

Make me an app for my book club

VS

YOUR PROMPT

Product overview

User flow

Design system

Target user

“Make me an app for my book club” gets you something generic. Vague prompts get vague results. A **structured prompt** gets you much closer. 📌

Start with two sections: **what the app is**, then what the user does, step by step.

YOUR PROMPT

```
## Product overview
```

```
A simple app where book club members  
suggest books for the group to read  
next.
```

```
## User flow
```

- ```
1. User opens the app and sees the list
2. User adds a book with a short note|
```

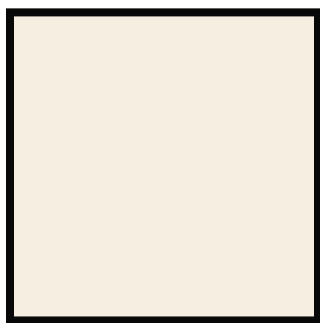

Written in markdown, the simple formatting  
Lovable reads.

Then **how it should look**. Not sure about colours and fonts yet? Describe the mood instead; Lovable will interpret it.

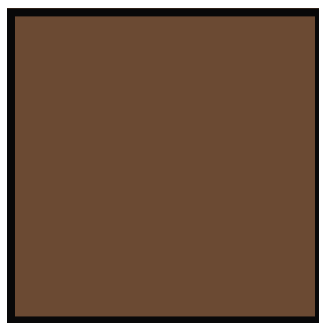

## YOUR PROMPT

```
Design system
```

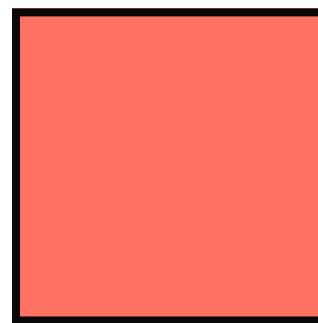

- Colours: warm cream, coral accents
- Style: cosy, bookish, friendly

cream

brown

coral

And who it's for. **Describe your user clearly**, and the app comes back shaped around her.

## YOUR PROMPT

```
Target user
```

```
Sarah, a book club organiser who wants
to spend less time on admin and more
time reading with friends.|
```

**Sarah**

book club organiser

The golden rule: describe  
**ONE core feature**, and  
leave the rest out.

~~voting on the next book~~

~~reading deadlines~~

~~progress tracking~~

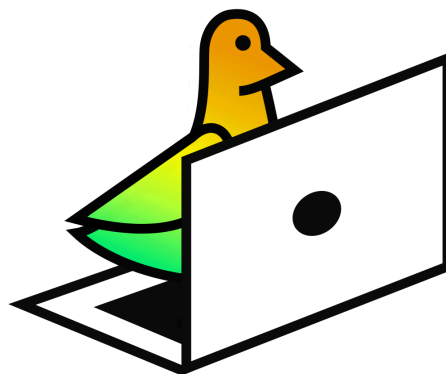

**one shared reading list**

The first prompt skipped voting, deadlines, and tracking. Those come later, one prompt at a time.

The full copy-paste template is in the  
**Build Your First App with Lovable**  
course toolkit.
