# Where your code runs

**The part AI agents still struggle with**

### Development

your own copy to debug and experiment with

### Sandbox

where AI agents can keep working when your laptop is closed

### Production

what your end users use

LittleParrot.app

Tech skills in the AI era · 3/5

# The tools developers and AI agents share

### Git
go back to the last working version, and let agents work in parallel

### GitHub
access your organisation's codebases

### The command line
build tools and automations on your own computer

### Databases
prototype admin features and read user metrics

### VS Code
see exactly what an agent changed

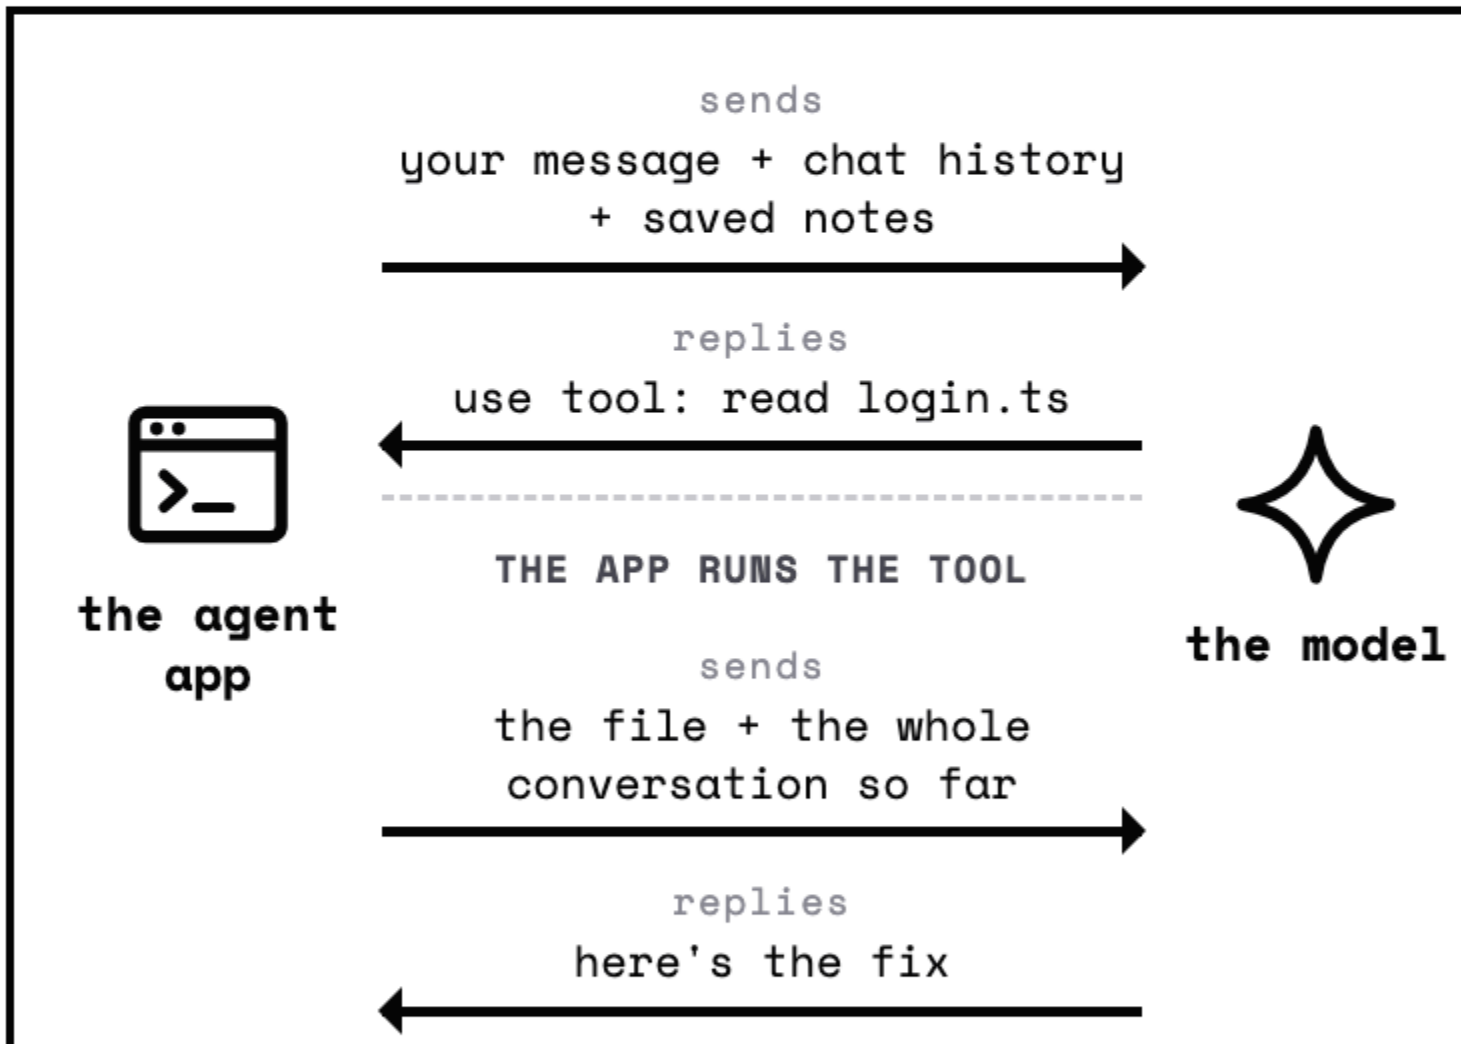

AI agents like Claude Code use them too.

# What happens when you ask an AI agent

fix the login bug

The model only writes text. The app runs the tools and sends the chat history and saved notes with every message.

**LittleParrot.app**

# Spec first vs small steps

## BIG SPEC UP FRONT

write the whole spec

the agent builds everything

?

find out what's wrong at the end

## SMALL STEPS

one small change → test it

**find out what's wrong after every step**
