

What structured data tells a search engine

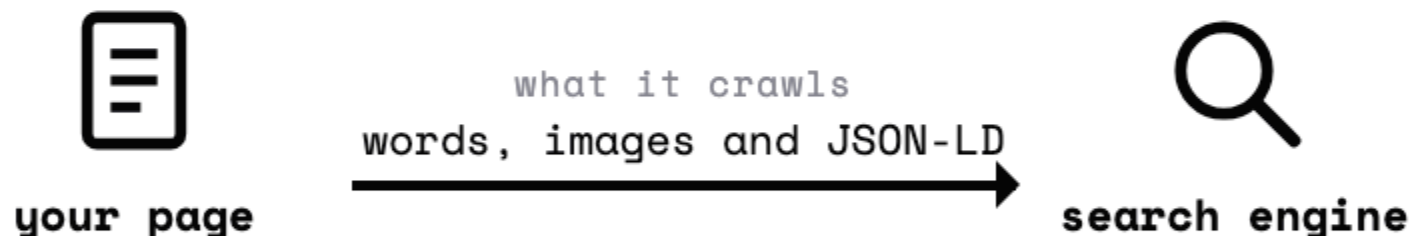

WITHOUT STRUCTURED DATA

IT HAS TO WORK OUT WHAT THE PAGE IS

A person? A company? A product? A course? An article?

WITH STRUCTURED DATA

YOU ADD THIS TO THE PAGE

```
{
  "@context": "https://schema.org",
  "@type": "Course",
  "name": "Building apps with AI",
  "description": "Get your app ready for customers.",
  "provider": { "@type": "Organization", "name": "Little Parrot" }
}
```
